

WORK ORDER FORM v2.1

Work Order Date: 1/27/2026

Client Name: Hefty Power System Corporation
Contact Person: Angela Karyl Millan

System/Application Name: qASA
Ticket/Reference Number: WOF-26-0127

I. REQUEST DETAILS (To be filled by Client)

No	Request Type (Hardware, New Feature, Bug)	Module/Screen (Where is this?)	Attachment?	Detailed Specifications (Include: Inputs, Formulas, Permissions, Expected Result)	Priority (Critical, High, Medium, Low, Cosmetic Fix)	Remarks
1	New Feature	Default Screen, File Window	[x]	Request: The system shall allow users to access and view accounting transactions from previous years. Specs: Add a Year Filter option in the File window. Users can select a year to: - View transactions - View reports (e.g., General Ledger, Trial Balance, Financial Statements) - Add /Edit transactions by authorized user only The currently active year is clearly labeled (e.g., "HPSC: FY 2026"). User can select any available fiscal year from the File menu. System loads only transactions belonging to the selected year. Closed years cannot be edited unless reopened by an authorized user.	High	Attachment: WORK ORDER ATTACHMENTS.pdf – Page 1
2	New Feature	Financial Statement Module, Post Closing Trial Balance	[x]	Request: At the end of a fiscal year, the system shall support formal closing of books with user intervention and proper authorization. Specs: The system does not automatically close books. Closing the books requires Manual verification by locking of an Authorized User. Once the book is closed, transactions can be read only but editable by authorized user only.	High	Attachment: WORK ORDER ATTACHMENTS.pdf – Page 2

WORK ORDER FORM v2.1

3	New Feature	Financial Statement Module, Post Closing Trial Balance	[x]	Request: Establishing beginning balances for the current year from the ending balances of previous year. Specs: Editable by authorized user only.	High	Attachment: WORK ORDER ATTACHMENTS.pdf – Page 2
4	Bug	Accounts Receivable Module, Browse SI	[x]	Request: Checked Service Invoice does not appear in browse SI list. Specs: Since browse SI is not functional at all in Accounts Receivable Module, remove the browse SI and automatically display as AR, service invoices already checked in the Service Invoice Module.	High	Attachment: WORK ORDER ATTACHMENTS.pdf – Page 3
5	New Feature	AR Aging of Accounts	[x]	Request: Automatically display Verified AR in Aging Module. Specs: Redesign the displayed table.	High	Attachment: WORK ORDER ATTACHMENTS.pdf – Page 4
6	New Feature	AP Aging of Account	[x]	Request: Automatically display Verified AP in Aging Module Specs: Do not include paid AP in the Aging, or once paid remove in the Aging.	High	Attachment: WORK ORDER ATTACHMENTS.pdf – Page 5
7	New Feature	Check Register Module	[x]	Request: Add Browse PV in the Check Register Specs: Before Printing a check in the Check Register, allow the user to browse the PV due for payment. Also allow the user to select multiple PV with the same supplier and the amount editable before printing. Add Export to Excel option.	High	Attachment: WORK ORDER ATTACHMENTS.pdf – Page 6
8	New Feature	Check Register Module	[x]	Request: Match the printing format to the check voucher. Specs: In the preview before printing check, match the format with the attached check voucher.	High	Attachment: WORK ORDER ATTACHMENTS.pdf – Page 7

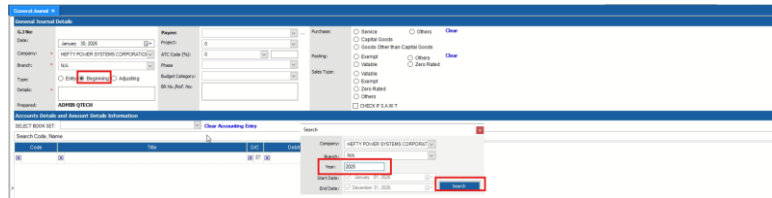

WORK ORDER FORM v2.1

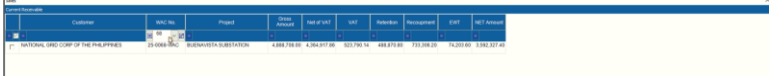

II. TECHNICAL ASSESSMENT (To be filled by Qtech Team - Corresponds to items above)

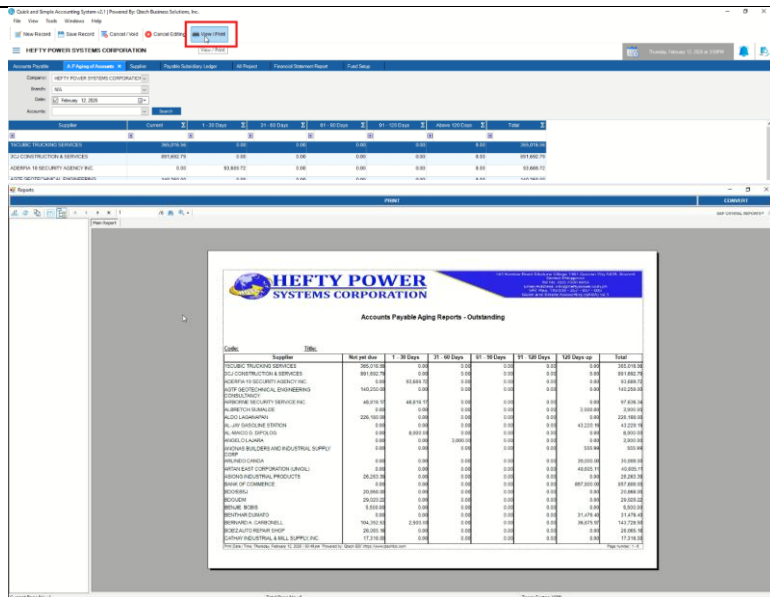

No	Feasibility Analysis (Feasible, Needs Info, Not Feasible)	Action Plan/Technical Note	Est. Hours	Target Date	Billing Type (Warranty, Billable, Quotation Required)	Estimated Charge (800/hr)
1	Feasible / Needs Info	Year View & Archiving Strategy: CONFIRMATION REQUIRED: [] Option A (Global Shortcut): Logic: Keep all data in ONE database. Add a "Fiscal Year" dropdown menu to simply hide old transactions from the view. Pros: Safest. No risk of losing AP/AR links. Lowest cost. Cons: Database size grows over time. [] Option B (Separate Database - Manual Cutoff): Logic (As initially discussed): We manually move the 2025 data to a separate file system (e.g., HPSC_2025.mdf). To view old data, the user must open a separate "Viewer" application. STRICT CONSTRAINT: All Payables (AP) and Receivables (AR) for the year MUST be fully paid/collected before archiving. Risk: Once archived, these transactions are removed from the Live System. You cannot process a Payment Voucher (PV) or Collection Receipt (CR) for them anymore because the reference ID will no longer exist in the active system. [] Option C (Automated Archiving Feature): Logic: Build a "Year End Archive" module. The admin selects a year to archive. Validation Logic: The system will automatically check if there are any unpaid AP or AR. Restriction: If any transaction is still open/unpaid, the System will BLOCK the archiving process. It will only allow archiving once the balance is zero. Implication: Ensures data integrity but requires the admin to clean up all floating balances before using this feature.	Opt A: 16.0 Opt B: 12.0 Opt C: 38.0	Opt A: March 11, 2025 Opt B: March 11, 2025 Opt C: March 18, 2025 <i>(Requires extensive testing)</i>	Billable Billable Billable	12,800 9,600 30,400

WORK ORDER FORM v2.1

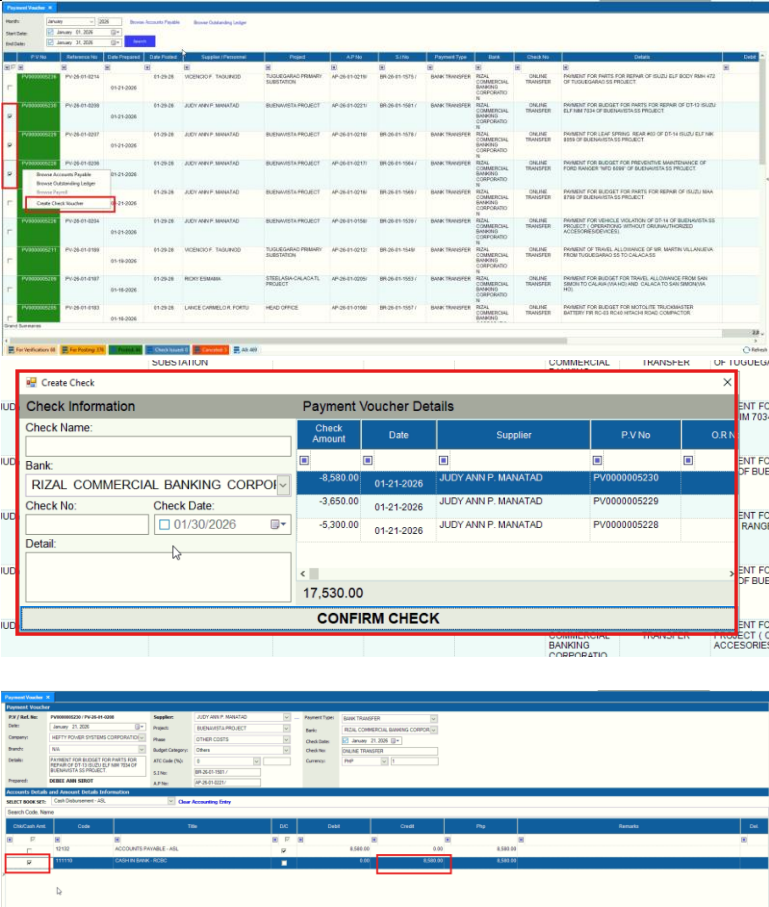

2	Feasible	Closing of Books Logic: Develop "Period Closing" module to lock transactions based on selection. CONFIRMATION REQUIRED: [] Option A (Annual): Lock books once a year (Dec 31). <i>Note:</i> The system already has this feature (Shortcut: Shift+Alt+Z). This function displays a list of Unverified Transactions to alert the user before proceeding with the close. Once closed, users cannot Add, Edit, or Modify transactions for that year. Only authorized personnel can reopen the closed period. [✓] Option B (Quarterly): Lock books every 3 months (Q1, Q2, Q3, Q4) for stricter control. <i>Implications:</i> Strict Cut-off: Users cannot "backdate" forgotten transactions (e.g., recording a January invoice in April) once Q1 is closed. Admin Dependency: Any correction to a previous quarter requires an Admin to manually Unlock the period, which may increase the Admin's workload. Reporting: Ensures that Quarterly Financial Reports are "Final" and cannot be changed retrospectively.	--	--	Existing	
			Opt B: 16.0	Opt B: March 11, 2025	Billable	12,800
3	Feasible	Beginning Balances Strategy: <i>(Note: This feature already exists in the System. See attached screenshots.)</i> CONFIRMATION REQUIRED: [✓] Use Existing Module: Current Process: Go to General Journal → Select "Beginning" Entry Type → Select Year. Automation: System automatically pulls Ending Balances from the prior year. Editability: Unlike the Crystal Report (which is read-only), this Journal Entry can be modified by the user before saving. 	--	--	Existing	

WORK ORDER FORM v2.1

4	Feasible	AR Workflow Automation: Bug Fix Status: "Checked Service Invoices not appearing" is Already Fixed.  New Requirement: Automate AR Voucher creation. Logic: Once a Service Invoice is "Checked," the system will automatically generate an <i>Accounts Receivable Voucher (ARV)</i>. - The generated ARV status will be 'For Posting'.	12.0	March 11, 2025	Billable	9,600
5	Feasible	AR Aging Enhancement: A. Query Update (Warranty): Update SQL logic to show Verified transactions only. B. Breakdown / Drill-down - Clicking a Customer in Aging Report opens a breakdown window. Columns: Customer, Project Code, Date, Desc, WAC No, Invoice No, Net Amount, Aging Buckets (0-30, 31-60, 61-90, Over 90 Days).	A. 2.0 B. 8.0	A. March 11, 2026 B. March 11, 2026	A. Warranty B. Billable	-- 6,400
6	Feasible	AP Aging Enhancement: A. Status Display Fix: - Paid AP transactions are correctly excluded from Aging, but erroneously appear in "For Posting" list. Action: Update display status logic to remove Paid APs from "For Posting" view. B. Aging Filter: - Update AP Aging Report to show Verified payables only.	2.0 2.0	March 11, 2026 March 11, 2026	Warranty Warranty	

						
7	Feasible	Check Register (Multi-Pay): Status: Multi-select functionality already exists (User can select multiple PVs of same supplier) . Edit Restriction: Request to edit Check Amount is NOT Recommended. <i>Reason:</i> System currently sums amounts automatically. Allowing manual edits creates discrepancies between the Check and the Payment Voucher (PV). <i>Process:</i> If a partial payment is needed, the user must update the Payment Voucher record first.	--	--	Existing	

WORK ORDER FORM v2.1

						
8	Feasible	Check Printing Alignment: • Re-align Report Layout (Crystal/RDLC) to match the physical check coordinates provided in attachment.	4.0	March 11, 2026	Warranty	

NOTE: Target Date is estimated based on receiving the **approved WOF** and **Approved Quotation/PO** by **February 16-18, 2026**. Delays in approval will adjust the deployment schedule accordingly.

III. APPROVAL & AUTHORIZATION

Requested By:

Angela Karyl Millan
Signature over Printed Name
Date: 1/27/26

Assessed By (Qtech) :

Erica Dane B. Gutierrez
Signature over Printed Name
Date: 1/30/2026
