

TECHNICAL TASK SPECIFICATION FORM v1.0

Project	qASA-Hefty	Document No	TTS-26-010702
Module	Accounts Receivable Voucher	Document Date	May 19, 2026
Priority	High	Target Date	June 25, 2026
Reference Doc	HEFTY WOF-26-0127.pdf	Assigned To	Jinuelroy Eule
	WOF-26-0127 #4	Prepared By	Erica Dane Gutierrez

I. Objective

To speed up and automate the bookkeeping process. When a user marks a **Service Invoice** as "**Checked**", the system will instantly and automatically generate the matching **Accounts Receivable Voucher (ARV)** in a "**For Posting**" status. This eliminates manual double-entry and prevents errors between billing and accounting.

II. Specifications

A. The Automation Trigger & Safety Check

- **The Magic Trigger:** The automation must run *only* when a Service Invoice's status changes from any draft state to "**Checked**".
- **Pre-Flight Validation:** Before creating the AR Voucher, the system must perform a quiet validation check to ensure all required fields (such as Subsidiary Ledger accounts) are fully mapped on the source invoice.
- **Failure Guard (Rollback):** If the invoice is missing key details and the AR Voucher cannot be created, the system must **revert** the Service Invoice back to its previous state (not let it stay "Checked") and show an error message explaining what went wrong.

B. AR Voucher Creation Rules

- **Status Assignment:** Every auto-generated AR Voucher must start with the status "**For Posting**".
- **Data Copying (Field Inheritance):** * The original Service Invoice Number must be saved in the AR Voucher's reference field so there is a clear digital paper trail linking them.
 - The Posting Date on the new AR Voucher must default to the date the Service Invoice was checked.
- **Double-Prevention Guard:** The system must recognize if an AR Voucher was already created for this specific invoice to prevent creating duplicate vouchers if an invoice's status is updated more than once.

C. Screen Alerts & Navigation (UI/UX)

- **Success Toast Alert:** As soon as an invoice is marked "Checked", a temporary success message must pop up on screen: *"Success: Service Invoice [Invoice ID] checked. AR Voucher [Voucher ID] has been generated for posting."*

TECHNICAL TASK SPECIFICATION FORM v1.0

- **Direct Shortcut Link:** The success alert (or the header of the invoice) must include a clickable link that opens the newly generated AR Voucher directly in a new tab or view.
- **Error Alert:** If the automation fails, display this clear notification: *"Automation Failed: Could not generate ARV. Please ensure all Subsidiary Ledger accounts are mapped."*

III. PM Review / Developer Hand-off Checklist

- ☐ **Accurate Automation Trigger:** Does changing an invoice to "Checked" immediately kick off the voucher creation?
- ☐ **Data Copy Verification:** Do the Customer, Total Amount, Currency, Tax Codes, and individual item rows copy over perfectly?
- ☐ **Status Verification:** Is the newly created voucher's status set specifically to "For Posting"?
- ☐ **Audit Trail Link:** Does the generated AR Voucher display the original Service Invoice ID in its reference area?
- ☐ **Failure Rollback:** If you try to check an invoice with unmapped accounts, does the system block the save and revert the invoice status?
- ☐ **Duplicate Prevention:** If an invoice is edited and "Checked" again, does the system block a second voucher from being created?
- ☐ **Navigation Link:** Can you easily click a link in the success popup to go straight to the new AR Voucher?

IV. Acceptance Criteria (QA Checklist)

- ☐ **Trigger Accuracy:** Moving a Service Invoice to 'Checked' successfully triggers the automatic generation of an AR Voucher.
- ☐ **Status & Visibility:** The generated voucher correctly appears in the Accounts Receivable Module under the "For Posting" tab.
- ☐ **Calculations Match:** The total currency values, line items, and tax calculations on the AR Voucher match the Service Invoice down to the last decimal point.
- ☐ **Traceability:** Users can easily click back-and-forth between the original Service Invoice and the generated AR Voucher.
- ☐ **Negative Action Test:** Ensure that leaving a Service Invoice in "Saved" or "Draft" status does *not* trigger any voucher generation.
